

# FENCEPRO Ultra G3

## Standard Features

- 4.8 metre hydraulic hinge mast
- 6 Bank Valve (2 spare)
- Hydraulic top link and side tilt
- 350 mm mast shift
- 300 kg block with nylon slides
- Height adjustable feet
- 75 mm diameter mast pivot
- External pressure relief valve
- 11 mm wire rope
- Single pulley on top of mast
- Guard around pulley housing
- Extra large rope pulleys

The photo shows the Ultra G3 with a 900 mm side mount unit and a Rock Spike Extractor System mounted on the operators side of the mast.

## FENCEPRO post driving

The Ultra G3 shares the FENCE-PRO post driving system with the rest of the FencePro range. This is made up of two main benefits;

### 1. Fast post placement

When the FENCE-PRO post driver is mounted on a side mount or rear mount unit, the mast always moves in logical straight line directions, controlled by one lever per direction. On other brands, the operator needs to adjust two levers to move the mast in one direction. This is normally because the mast is swinging in an arc.

### 2. Fast Cycle times

The size of the lift ram and the ratio of the pulleys are matched to the weight of the block. This ensures there is no downtime between hits, and in the case of the Ultra G3 you can select a block weighing up to 350 kg!

*“So fast and easy to use”!*

# FENCEPRO

# Ultra G3

## Options

- 350 kg block upgrade
- 420 mm and 900 mm side mount unit
- Rear shift unit (compact 250mm)
- Rock Spike Extractor system (RSE)
- Hydraulic auger system on RSE
- Hydraulic auger system without RSE
- Ultra hydraulic post lifter
- Ultra side mount leg roller
- Rock Drill System

## Rock Spike Extractor System

The FENCE-PRO Rock Spike Extractor System (RSE) can be fitted to either side of the mast. It is commonly mounted on the operators side and swung into the work position either manually or hydraulically. If it is mounted on the far side of the mast, then hydraulic actuation is the only option. This is for the safety of the operator, FENCE-PRO do not want them to reach past the monkey (block) to swing it around.

The Rock Spike can be removed from the RSE and replaced with a hydraulic auger or Rock Drill. The RSE is also a capable post puller.

The Ultra G3 is normally fitted to the side mount 900 unit and is shown with an optional second tier valve bank. These are sometimes needed when an auger is fitted.

The Rock Drill is ideal for Schist and tough rocky conditions. It mounts to the Rock Spike Extractor and uses a high torque planetary drive hydraulic motor.

**“The Ultra G3 is the most versatile and durable post driver around”!**

Consultation with professional fencing contractors and careful attention to detail has resulted in a rammer that can handle any conditions. Computer aided design and world class manufacturing techniques ensure the FENCE-PRO rammers are assembled accurately for ease of use and long life.

Contact the FENCE-PRO team to discuss your local fencing conditions and the recommended options for your area.
