

LION

PÖTTINGER power harrows

Preparing the soil

Power harrows with working widths
between 8.2" to 19.7" / 2.50 and 6 m

The rotary power harrow plays an important role in the PÖTTINGER arable farming concept. Best crumbling and excellent mixing of the soil are the highlights of PÖTTINGER power harrows. Combined with a PÖTTINGER seed drill, this machine becomes a high performance and cost-effective combination delivering perfect drilling results. PÖTTINGER offers tailor-made systems for every type of soil and every size of operation.

The rotor transmission

The heart of the machine

Robust, smooth running and durable

LION power harrows guarantee extremely smooth running and high strength. These machines operate reliably even in the hardest conditions and heaviest soil.

Just take a look at this impressive technology

- Thick-walled gear trough made of fine-grained steel – extremely resistant to twisting.
- Tapered front edge – soil can flow past unrestricted without bulldozing.
- Large gears feature integrated bearings. Extended inner splines for a secure seat on the rotor shaft.
- The bearing housings are welded to the central gusset and bottom of trough. An exact spacing between each rotor is guaranteed as a result.
- Robust tapered roller bearings in forged, single-piece bearing housings.
- The lower bearings are located as close as possible to the tine carrier, helping to reduce lateral stress.
- The upper and lower bearings are spaced as far apart as possible to reduce load and minimise stress.
- The forged, full-width tine carriers are integrated into casing. This offers the best protection against wrapping because the tines deflect the soil away from the gear trough. As a result stones cannot become trapped between the rotors.

Impressive driveline

- 1.97" / 50 mm diameter rotor shafts on LION 103 series
- 2.36" / 60 mm diameter rotor shafts on LION 1002 series
- Bearings and gears run submerged in semi-liquid grease.
- Labyrinth rotor shaft seals.
- The tines are 0.71" / 18 mm thick and can be reversed to be used on both edges.
- 0.59" / 15 mm thick tines on LION 303.12 / LION 353.14 series
- Quick-fix tine replacement system optional.

LION 103 series **(1)**

LION 1002 series **(2)**

LION

Quality

LION – Precision in every detail

Extended service life is only possible thanks to precision machining and strong construction. At PÖTTINGER this level of high quality goes without saying.

Gear trough and tine mountings

- The high-strength deep gear trough provides the gearbox with excellent torsional strength.
- Large toothed gears, 1.97" or 2.36" / 50 or 60 mm thick rotor shafts with heavy-duty tapered roller bearings and wide bearing spacing ensure durability.
- The deep gear trough is formed from a single piece of steel. The welded central gusset provides maximum stability.
- The bearing housings are welded into the box section before milling at the CNC machining centre. This ensures exact rotor-to-rotor spacing and guarantees you smooth-running and a long service life.
- Forged components from the PÖTTINGER hardening centre offer many years of reliability.

Durable bearings

The bearings and gears are sealed and run submerged in semi-liquid grease. The tough bevel gears are made from tempered steel. The lower bearing is located close to the tine carrier. This takes the stress off the bearing and reduces wear.

- The shaft and bearing are protected by a labyrinth seal, which prevents loss of semi-liquid grease and at the same time ensures no dirt can penetrate.

Tines hardened completely through

The tines are the critical interface to the seedbed.

Penetration of the ground is optimised for the most uniform tilth.

- LION power harrow tines are swept inwards and angled to the rear. As a result the soil near the surface is loosened and crumbled intensively. Larger clods remain lower down.
- The shape of the tine is designed for standard drilling, mulch drilling and direct mulch drilling.
- The 0.71 x 12.6" / 18 x 320 mm thick tines are made from hardened boron steel and are heat treated right through the complete cross section.
- The LION 303.12 features tines with dimensions of 0.59 x 12.6" / 15 x 300 mm.
- Both tines are seated securely in the recesses in the tine carrier. Two alignment pins keep the tines centered and they are secured using a clamping plate.
- Only two bolts are needed on each rotor. These can be loosened without chocking the rotors.

DURASTAR tines – coated and proven in the field

- 60 % longer service life thanks to special hard wearing coating
- 0.59" / 15-mm and 0.71" / 18-mm-thick reversible tines
- Excellent retention of shape
- Consistent work quality

LION

Technology at the highest level

Quick-fix tines

The rapid and reliable solution available as an option

- Remove lynch pin and lock pin
- Remove tines
- Fit new tines
- Refit lock and lynch pin – finished!

Universal tines for every operation

The tines can be positioned aggressively pointing forwards, or in a trailing position. Either position achieves excellent tilth at seed placement level.

Sweeping position – for good crumbling effect at seed level

- Finer soil is concentrated at the level of the seed. Larger clods and harvest residues remain on the surface to protect against erosion.

Aggressive position – for breaking up the ground

- Angled forwards the tine breaks up the soil from underneath for mulch drilling, mixing harvest trash well into the soil.
- Only possible with the 0.71" / 18 mm thick tines.

Robust linkage

- The linkage is widely supported. Double-sided Category 2 and 3 free swinging lower linkage and three position adjustment are designed to bring the power harrow as close as possible to the tractor.
- On the LION 403 and 4002 the headstock is fitted with additional side struts.

LION variable speed gearbox

LION 303, LION 303.12 up to 180 hp

LION 353.14, LION 403 up to 200 hp

LION 3002, LION 4002 up to 250 hp

Select the desired rotor speed by changing gear combinations. PTO shaft is only at a minimal angle with the input shaft placed well back. As a result smooth, quiet operation in the field and at headlands. Cam clutch protection ensures trouble free operation and gearbox cooling fins regulate gearbox oil temperature. A rear PTO shaft is available as an option.

LION CLASSIC Fixed speed gearbox

LION 253 CLASSIC, LION 303 CLASSIC, LION 303.12 CLASSIC

Straightforward fixed-speed gearbox rated up to 140 hp. The PTO shaft is kept at a minimal angle thanks to the input shaft being placed well back. Rear PTO shaft is not available on these models.

LION lever change variable speed gearbox up to 270 hp

LION 5000, LION 6000

LION

Standard & Optional Equipment

Side boards

LION 253 CLASSIC, LION 303 CLASSIC, LION 303.12 CLASSIC

Side boards can be folded upwards and feature depth adjustment using slotted holes. For transport these are simply folded upwards. Transport width less than 8.2" or 9.8" / 2.5 m or 3.0 m.

LION 303, LION 303.12, LION 403

The height of the side boards is adjusted using slotted holes. These can be simply folded upwards during transport. A parallel linkage optional.

- Spring-protected side boards optional.
- Unique system: The spring does not need to be disengaged to fold up side boards.

Levelling Board

The rear levelling board is standard and is set automatically with the depth of the rear roller – no readjustment is necessary. Consistent distance from the tines over the full working depth range thanks to linear guides on frame.

- Initial depth set using pin-in-hole adjustment.
- This is easily accessible from the side.

The front levelling board (optional) is identical to the rear board.

Optionally available are power harrow mounted bout markers (except CLASSIC models).

Field-proven rear rollers

- Conveniently the scrapers can be adjusted from a central point as well as individually.
- A POTTINGER seed drill can be mounted directly to the rear roller and top link. The result is the seed drill and roller work as one follow ground contour changes exactly. Closely mounted to the roller scraper bar keeps overall length to a minimum.
- Coated hard wearing scrapers are standard on 19.68" / 500 and 21.65" / 550 mm tooth-packer roller, crumbling-packer roller, pack ring roller and rubber packer roller.

Wheel track eradicators

Spring-mounted track eradicators are on all LION power harrows. These are spring-mounted to protect against stones and foreign objects. The working depth can be adjusted without using any tools.

LION

Mounting and linkage configurations

**Reducing costs is top priority in arable farming.
Save money with a power harrow/seed drill combination.**

HYDROLIFT

- Hydraulic mounting system for independent seed drills with eight and length adjustable linkage.
- Two hydraulic cylinders guarantee maximum lifting power up to 52.91 sht / 2.4 t for larger mounted seed drills.
- Lift height limiter optional.

Implement mounted with a mechanical top link.

- VITASEM and AEROSEM seed drills from PÖTTINGER can easily be mounted.
- The centre of gravity is in front of the rear roller – very close to the tractor. The additional weight of the seed drill on the roller provides even better consolidating effect for the seedbed. The gap between the coulter rail and the rear roller is minimised to form a compact unit.
- The piggy-back drill is mounted on the packer roller and guided by the top link using a parallelogram so the packer and seed drill form a single unit. This enables the working depth of the power harrow to be changed by adjusting the roller without having to correct the seed drill top link.

Piggy-back with hydraulic top link.

- A hydraulic cylinder is also available to pivot the seed drill up over the power harrow.
- Improved centre of gravity in relation to tractor.
- High ground clearance of drill coulters at headlands.

LION 253 / 303 LION 303.12 CLASSIC

For tractors up to 140 hp.

With the LION CLASSIC series PÖTTINGER offers slightly lighter models compared to the standard LION power harrows. The CLASSIC version is available with working widths of 8.2" / 2.50 m with 8 rotors and 9.84" / 3 m with 10 or 12 rotors.

Gearbox versions

CLASSIC gearbox up to 140 hp

LION 253 CLASSIC, LION 303 CLASSIC, LION 303.12 CLASSIC

- PTO input shaft mounted far back, gearbox equipped with cooling fins.
- Fixed rotor speed.
- Rear PTO shaft not possible.

Side boards

The height of the side boards is adjusted using slotted holes. These can be simply folded upwards during transport.

LION 303 / 403

LION 303.12 / 353.14

For tractors up to 180 hp / 200 hp

With the LION 103 series, PÖTTINGER offers models for tractors up to 200 hp. The LION 103 comes with working widths of 9.84" / 3 m, 11.48" / 3.5 m and 13.12" / 4 m.

Gearbox versions

LION changeable speed gearbox up to 180 hp / 200 hp

LION 303, LION 303.12 up to 180 hp,

LION 353.14, LION 403 up to 200 hp.

- Proven changeable speed gearbox, variable rotor speed.
- PTO input shaft mounted far back, gearbox equipped with cooling fins.
- Rear PTO shaft available (optional).

Side plates

The height of the side boards is adjusted using slotted holes. These can be simply folded upwards during transport. Parallel linkage optional.

- Spring-protected side boards optional. Unique system: The spring does not need to be disengaged when folding the side boards upwards.

LION 303.12 / 353.14

- These power harrows guarantee best results on heavy clay soils.
- It is the ideal choice for potato and vegetable farms.
- A very fine disengaged when folding the side boards upwards. is achieved because more tines are in use than on 10-rotor machines.
- Thanks to the interchangeable gears the rotor speed can be adjusted to suit any soil conditions and PTO shaft rpm.
- The LION 303.12 / 353.14 universal 0.59 x 11.91" / 15 x 300 mm tines are designed for a working depth down to 9.84" / 250 mm.
- The fully hardened tines ensure a long service life.

LION 3002

LION 4002

For tractors up to 250 hp

Proven top level performance up to 184 kW / 250 hp

The machine for the professional with working widths of 9.84" / 3 and 13.12" / 4 m. Proven technology for all soil conditions. You can rely on these LION models in the most demanding situations.

Sturdy gear trough and engineered tine mountings

- The high-strength deep gear trough provides the gearbox with excellent torsional strength.
- Large toothed gears, 2.36" / 60 mm thick rotor shafts with heavy-duty tapered roller bearings and wide bearing spacing ensure a long service life.

Tough from the ground up

The deep gear trough is formed from a single piece of steel. The welded central gusset provides additional stability. The bearing housings are welded into the box section with the central gusset before being milled on the CNC machining centre. This sequence ensures exact axis spacing between each rotor; The guarantee for extremely smooth running and a long service life.

LION 3002

LION 4002

High performance power harrow technology

For the toughest operating conditions

Power harrow technology for the highest power class

- Robust wide headstock – with additional side struts on LION 4002.
- Clevis-type Category 2 and 3 free swinging lower linkage with three position adjustment are designed to match every tractor.
- The side boards are spring-mounted and can be raised.
- Parallel linkage optional.
- The gearbox features large cooling fins for maximum heat dissipation. A cam-type clutch is integrated into the PTO shaft to protect the transmission. Rear PTO shaft is also available.
- The large-dimensioned, heat-treated precision bevel gears are submerged in semi liquid grease. 2.36" / 60 mm thick rotor shafts with tapered roller bearings ensure durability. Cartridge sealing guarantees absolute leak-tightness of the gear trough.
- The forged, full-length tine carriers are integrated into casing. This offers best protection against wrapping because the tines work the soil away from the trough. Stones cannot become trapped between the rotors.
- Heat-treated tines are 59" / 18 m thick for a working depth down to 11.02" / 280 mm.

Professional kit

Setting up for different soil conditions has to be quick and uncomplicated in this category. Well thought out details make adjustments more straightforward.

- The rear levelling board is supplied as standard and is height-adjusted automatically by the rear roller – no manual adjustment required. Consistent distance from tines over full working depth thanks to linear guides on the frame. Initial depth is set using pin-in-hole adjustment – easily accessible at each end of the levelling board.
- The front levelling board (optional) is identical to the rear board.

Spring-protected side boards

- Spring-mounted side plates are standard on the LION 3002 and 4002.
- Parallel linkage optional.
- These can be simply folded upwards during transport. Unique system: The spring does not need to be disengaged to fold up the side boards.

LION 5000

LION 6000

For tractors up to 270 hp

Folding series up to 199 kW / 270 hp

These power harrows with working widths of 16.40" / 5.0 m and 19.68" / 6.0 m can be folded up for road transport for a transport width of just 8.85" / 2.70 m.

Power harrows for high output

- Category 3 Linkage.
- A robust hydraulic folding frame fitted with torsionally resistant gear troughs.
- Side drive shafts with cam-type clutch P 500 Powerline with long lubrication intervals. Main PTO shaft P 600 Powerline.
- 3-speed lever change gearbox for the best possible power transfer, a rear PTO shaft is standard.
- Heat treated bevel gears run submerged in semi-liquid grease. Quiet running, high quality durable gear train.
- Large dimensioned tapered roller bearings are held in single-piece bearing housings.
- Heat-treated tines 0.70" / 18 mm thick for a working depth down to 11.02" / 28 cm.
- The rear levelling boards are adjustable vertically and horizontally.

Transport position

- Two large hydraulic cylinders fold each half of the power harrow through 90° for a transport width of just 8.85" / 2.7 metres.
- Thanks to the compact design, the centre of gravity is kept close to the tractor.

LION

Rollers

Cage roller

The ideal roller for dealing with dry, non-sticky soils. The roller is fitted with strong bars for optimal consolidation. Diameter 16.5" / 420 mm, 8 bars, diameter 21.3" / 540 mm, 11 bars.

Toothed packer roller

This roller is suitable for all types of soil. The roller leaves behind an optimum, re-packed seedbed with loose, fine soil at seed level. The scrapers are located just above surface level. That is why no earth clods can be lifted away, even in wet conditions, and a perfect capillary structure remains intact for optimum germination. The scrapers can be adjusted centrally and individually. They can simply be pivoted away for cleaning. The hardened scraper plates are reversible for double the service life. Roller diameter: 16.5", 19.7" and 21.7" / 420, 500 and 550 mm. The teeth are hardened right through. Case-hardened scrapers are also available.

Crumbling-packer roller

The teeth are offset at an angle to the left and right. This roller is especially suitable for heavy, clay soils. The result is a deep packing effect with loose crumbling effect just under the surface. Scrapers prevent soil sticking to the roller. Diameter 21" / 525 mm. Case-hardened scrapers are standard.

Pack ring roller

The packer rings are fully enclosed and have a diameter of 21.7" / 550 mm with 8 rings per metre of working width. Due to the small hub diameter, the scrapers do not need to contact the roller or be adjusted. The roller produces a corrugated consolidation effect to promote water absorption and allow the soil to breathe. Ideal for stony, damp conditions and heavy organic residues. Harvest residues remain on the surface of the soil and protect the soil against drying out. Case-hardened scrapers are standard.

Prism packer roller

Prism rings are spaced at 4.92" or 5.9" / 125 or 150 mm. This roller handles all operating conditions, including stony ground and larger quantities of harvest trash. The striped formation of re-consolidation promotes water absorption and allows the soil that is subject to less consolidation in the gap between the rings to breathe. Case-hardened scrapers are standard.

Rubber packer roller

This roller is ideal for widely varied ground conditions. Specially designed for use with trailed equipment that when used with other rollers can be limited. A diameter of 23.03" / 585 mm and the special profiling allows the soil to be consolidated in rows. Case-hardened scrapers are standard.
